

TechRetail Solutions — Sales Performance Insights

Business Analytics (Excel + Power BI) — Task 1 | Prepared for MainCrafts Internship

Total Revenue	Total Profit	Overall Margin	Total Orders	Avg Order Value
\$171,284	\$43,548	25.4%	160	\$1,071

Key Insights

- **Laptops and premium smartphones drive revenue.** The GameForce G5 (\$58,800) and NovaPhone 12 Pro (\$39,000) alone contribute ~57% of total revenue despite representing only 2 of 16 SKUs.
- **East and South regions lead sales**, together generating \$109,301 (64% of revenue), while the West region trails at \$22,497 despite a similar order count to East — pointing to a lower average order value in the West rather than fewer customers.
- **North has the strongest profit margin (28.2%)**, above the 25.4% company average, suggesting more efficient pricing or a favorable product mix in that region worth replicating elsewhere.
- **Sales dipped sharply in March** (\$15,852, the lowest month) before rebounding to a peak in May (\$40,366) — a pattern worth investigating against seasonality, promotions, or stock availability.
- **High-volume, low-value accessories** (cables, sleeves, chargers) generate large unit counts but minimal revenue contribution (<2% combined), typical of add-on attach-rate items rather than standalone growth drivers.

Business Recommendations

- **Double down on top performers:** prioritize marketing spend and inventory for GameForce G5 and NovaPhone 12 Pro, which show the strongest revenue-to-SKU ratio.
- **Investigate the West region's lower order value** — review regional pricing, discounting, or bundle offers to lift AOV toward the East/South benchmark.
- **Study North's pricing/margin model** and evaluate whether it can be applied to other regions to lift overall profit margin above 25.4%.
- **Plan for the March dip** by reviewing supply, marketing calendar, or competitor activity that month, and consider a targeted promotion to smooth seasonal troughs.
- **Bundle accessories with high-ticket items** (e.g., free cable pack with laptop purchase) to increase attach rate and overall basket size without discounting core products.
